Subject:	SERVER ACCESS!!!
Attachments:	Hudson Gray Server.pdf

Hello all…
So I had a NICE meeting with ITSavvy today about the 'hudson gray data server'.
There is a way to connect to the server without ANY app being installed, or synchronization, etc…
It works from a PC and a MAC with the very usual way of a 'mapped network drive' in 'computer' on a PC, and a 'Mounted network drive' on the desktop on a Mac… the same way as you have been doing it in the past.

Attached is a document which explains the procedure for the PC, the MAC, and also talks about the 'mobile app'.

Please print and distribute between yourselves as I don't think I emailed everyone in that office.

Thanks,
David
